The specific polycarbonate resins used in Attabox™ enclosures are the best of the best.

With Attabox™ enclosures, the best performance at the best price is available in an American made product.

➔ What is polycarbonate?

- ▶ Engineered thermoplastic designed for extreme environments.
- ▶ Impact strength greater than many metals.
- ▶ Polycarbonate can be found in applications such as: bullet proof glass, football helmets, eyeglasses, cell phone cases and outdoor enclosures.

➔ Why polycarbonate?

- ▶ Its properties provide the highest UV rating (F1) with inhibitors that are present at every level of compound. In other words, it is not just surface protection.
- ▶ 5VA flame rating
- ▶ It has impact strength approaching 5 times that of fiberglass enclosures.
- ▶ Unlike fiberglass which requires a protective mask, it is easy to drill with no dusts, chipping, or cracking.
- ▶ Polycarbonate is an injection molded resin that allows for best in class cost and best in class performance.
