

Panel building requires innovative ideas
Klippon® Connect delivers pioneering connectivity solutions
Let's connect.

Connectivity

Klippon® Connect

Weidmüller 

We cannot guarantee that there are no mistakes in the publications or software provided by us to the customer for the purpose of making orders. We try our best to quickly correct errors in our printed media.

All orders are based on our general terms of delivery, which can be reviewed on the websites of our group companies where you place your order. On demand we can also send the general terms of delivery to you.

6

Standardised implementation of efficient solutions

Klippon® Connect universal products with PUSH IN technology

- 8 Feed-through terminal blocks
- 14 PE terminal blocks
- 20 Test-disconnect terminal blocks
- 22 Pluggable terminal blocks
- 28 3-tier terminal blocks
- 34 Disconnect and fuse terminal blocks
- 38 Accessories

42

Innovative ideas for panel building

Klippon® Connect solutions for recurring applications

- 44 **Power distribution (AMC)**
The secure and efficient way of distributing power
- 48 **Control voltage distribution (AAP)**
Safe supply for consumers in the panel
- 62 **maxGUARD – taking control voltage distribution to a new level**
Load monitoring and potential distribution combined
- 86 **Signal wiring (AIO)**
Clear wiring for high-density signalling levels

Extra efficiency in panel planning, installation and operation

Klippon® Connect offers added value at all stages

As your partner in Industrial Connectivity, we consider panel building to be an integrated process – from the planning stage all the way to installation and operation. The latest example of this is Klippon® Connect. Our offer – which consists of tailored application products, universal terminal blocks and process-supporting services – provides you with productivity benefits at all stages of the panel building process. These include benefits such as time-saving planning and project planning, faultless wiring, fast marking and much more besides.

Often, standardisation enables the right solution to be found with our sophisticated, function-oriented universal range. It provides you with practical product features. For recurring application fields, such as control voltage distribution or signal wiring, we offer you the ideal solutions with our application range. Thanks to the high level of application focus, these solutions really do help increase productivity, efficiency and safety.

Achieving greater productivity one step at a time

Every panel building process starts with the planning stage. It is here that the foundation for an optimum set-up is laid. Once there is a plan in place, installation starts. The panel components are marked, wired and checked. The fully installed panel can then be put into operation. To ensure that you achieve the greatest possible level of efficiency in this process, we have continuously examined the optimisation potential of both the individual phases (planning, installation and operation) and how they interlink with one another. Innovative products and services that support you in all the stages of the panel building process are the result.

Up to 75 percent engineering time saved

- Faster planning with the Weidmüller Configurator
- Error-free configuration through compatibility checks on products and accessories
- High level of transparency throughout the process thanks to linked data models
- Convenient creation of product documentation

High wiring density with maximum ease of installation

- Noticeably faster wiring with PUSH IN technology
- All product functions can be clearly distinguished
- Flexible potential distribution thanks to varied cross-connection options
- Faster marking thanks to endless marker strip and large marking surfaces

Sustainably higher availability during operation

- Simpler testing procedure thanks to integrated test point
- Rewiring possible during operation without special tools thanks to PUSH IN technology with pusher
- Gas-tight connections for interference-free operation
- Flexible, simple modification and extension

An effective fast track for planning processes

Easy configuration and request process with the Weidmüller Configurator

Engineering processes have to be completed with ever greater speed, precision and efficiency. This requires intelligent tools that provide optimum support for the complex planning processes.

The Weidmüller Configurator is a software solution for selecting, configuring and requesting terminal rails and terminal rail components from the Weidmüller range. The tool supports continuous engineering workflows from planning with E-CAD through to documentation.

Simple operation, a clear design and integration in your engineering systems make configuring terminal rails a simple, safe and convenient process. The fantastic attention to detail during the terminal rail assembly process increases planning quality compared with E-CAD systems.

The high-performance software makes it easier to select accessories, perform logic checks and label machinery and plant engineering equipment. It also simplifies the creation of parts lists and much more.

Your special advantages:

Simple operation and maximum attention to detail

The modern user interface and clear overview simplify operation and speed up configuration. What's more, the software's high attention to detail during the terminal rail assembly process guarantees improved planning quality compared with E-CAD systems.

Helpful wizard system

The intelligent wizard function documents every instance in which a terminal rail is assembled and only allows permissible configurations. Mistakes are corrected automatically.

**Integrated request function**

The selected components can be requested directly – either as individual components or pre-installed on a top-hat rail.

**Full engineering support**

The product data can be used in engineering systems such as EPLAN P8 or Zuken E3. 3D models are available for panel set-up.

**Test now**

The Weidmüller Configurator provides many advantages for your engineering processes. All information can be found at www.weidmueller.com/configurator

**Optimum labelling**

The Weidmüller Configurator enables user-friendly data exchange between CAD programs and marking systems such as M-Print® PRO.

Standardised implementation of efficient solutions

Klippon® Connect universal products with PUSH IN technology

Ever more efficiency is required in installation as a result of growing competitive and cost-related pressure. Innovative connection solutions that offer both minimal installation time and maximum safety for users and equipment alike are very much in demand here.

With their simple handling and compact yet clear design, our new Klippon® Connect A-Series PUSH IN terminal blocks allow you to benefit from faster installation times and, in turn, from much higher productivity. Subsequent modifications and rewiring are possible using the simple functional principle and the two-sided, spring-loaded mounting foot without the need for any special tools. And safety is not neglected either: the innovative, spring-based direct insertion also guarantees vibration-resistant, gas-tight contacts even in challenging applications.

With our sophisticated and function-oriented Klippon® Connect universal products, you can address every requirement under the same standard.

Save space and improve clarity and functionality:
Klippon® Connect terminal blocks with PUSH IN technology (A-Series)
optimise the wiring process

Your special advantages:

Take advantage of all the benefits of the PUSH IN technology

The innovative PUSH IN technology of the new Klippon® Connect A-Series reduces connection times for solid wires and wires with crimped on wire-end ferrules. They can be directly connected without tools for speed and safety. Coloured pushers prevent incorrect wiring and speed up the installation process.

Integrated cross-connectors

Integrated cross-connection channels increase flexibility and shorten wiring times for panel building. All cross-connectors can be adapted and marked easily.

Check and test point

The standardised check and test point simplifies wiring tests and troubleshooting at every level.

Integrated pushers

Simply pressing the pusher causes the contact to open and the conductor can be removed – and there's no need whatsoever for any special tools.

Efficient markers

Large marking surfaces at each contact point simplify circuit allocation. The new marker strips make labelling more effective.

Compensating mounting foot

A spring-loaded mounting foot compensates for differences in terminal rail dimensions. This makes latching and unlatching the terminal blocks easier.

Fast wiring – but safe

Klippon® Connect for optimum wiring in a confined space

Panel builders need to consolidate multiple connections. With a growing complexity of applications, the number of necessary connections is constantly expanding therefore raising the importance of using the space optimally.

Weidmüller's solution to this challenge are the Klippon® Connect 3-tier terminal blocks with PUSH IN connection. In addition to their space saving design, the coloured pushers and clear marking guarantee secure and structured wiring.

By combining three potentials on a width of just 5.1 mm, Klippon® Connect 3-tier terminal offer an optimal solution to the current industry requirements.

The intelligent design and varied connection options make the Klippon® Connect 3-tier terminal blocks with PUSH IN technology real all-rounders in an extremely wide range of industrial applications.

Your special advantages:

Test point on each tier

The integrated test point simplifies wiring tests and troubleshooting at every tier. The requisite measurements can be easily performed with a 2.0 mm test plug.

Efficient wiring

A terminal block is only 5.1 mm wide and can accommodate three potentials in order to save space. Cross connections on each tier permit a bridging of the potentials for shorter wiring time.

Simplified testing

The integrated test point on each tier allows for fast, straightforward testing procedures with standard testing plugs.

Safe and easy motor connection

Klippon® Connect motor connection terminal blocks permit a fast and safe wiring of three-phase motors in confined spaces.

Professional marking

Various marking options support an unambiguous identification of each connection point.

Large variety

Due to the colour-coded design and the different connection functionality, the terminal blocks are suited to a wide range of specialised applications.

Safety, protection and reliable disconnection of electrical circuits

Klippon® Connect combines protective functions and quick assembly

Current protection, disconnection, and voltage distribution are critical functions inside a panel. In order to provide staff and machinery with optimal protection, customisable connection solutions have to combine these aspects within a single system.

The new Klippon® Connect disconnect and fuse terminal blocks with PUSH IN technology offer passive current protection in combination with both disconnection and voltage distribution.

The terminal blocks from our universal range guarantee a high level of flexibility. Their compact dimensions enable a flexible installation even under confined space conditions.

The Klippon® Connect disconnect and fuse terminal blocks with PUSH IN technology can easily be used for various different protective functions in an extremely wide range of industrial applications.

Your special advantages:

Easy handling

Only a standard screwdriver is required to remove the fuse holder from the terminal block, making maintenance highly efficient.

Attached fuse holder

Each fuse holder is attached to a terminal block with a hinge. This means that it will not go missing when the circuit is disconnected or when a fuse is replaced.

Integrated test point

The integrated test point simplifies troubleshooting and maintenance: Any required measurements can be performed with a standard 2.0 mm testing plug.

Safe power supply to panel equipment

For an efficient control voltage distribution, Weidmüller offers potential distribution terminal blocks with and without fuse.

Functional clarity

In terms of their design, the terminal blocks are clearly distinguishable according to functionality and thus ensure safe and efficient maintenance work.

Test adapter

The test adapter ATPG can be used as single plate as well as a test adapter strip for measurements. Conductors in the cross-section of 0.5 mm² up to 1.5 mm² can be connected.

By easy snapping of the test adapter into the terminal, a safe contact is realized.

Innovative ideas for panel building

Klippon® Connect solutions for recurring applications

Panels are configured individually. But in virtually all industries, there are certain applications that make recurring parts in the panel a necessity. We have identified and developed tailored solutions for these application fields. By purposefully structuring and adapting the product functions to the respective requirements, we are helping to boost productivity, efficiency and safety at all stages of the panel building process.

Current and voltage transformer wiring

DCS marshalling

Signal wiring

Power feed-in

Control voltage distribution

Building installation wiring

Shielding and earthing

Power distribution

Power feed-in

Our wide range of W-Series terminal blocks with our WPD main line branch terminals, which are optimised to guarantee both convenience and space gains, ensures a secure and convenient connection at the power feed-in.

Power distribution

You safely and efficiently distribute electricity to the power consumers with our W-Series feed-through terminal blocks and our optimised WPD phase distribution blocks.

Control voltage distribution

Our tailored AAP potential distribution terminal blocks are ideal for surge current protection and central control voltage distribution. Meanwhile, our new maxGUARD range enables potential distribution with integrated electronic load monitoring in the smallest of installation spaces.

Current and voltage transformer wiring

Our test disconnect terminal blocks featuring spring and screw connection technology allow you to create all the important converter circuits for measuring current, voltage and power in a safe and sophisticated way.

Signal wiring

Tailored and particularly compact: with our AIO initiator/actuator terminal blocks, you are relying on an application-optimised solution for signal wiring. We also offer you other terminal blocks featuring spring and screw connection technology for signal wiring.

DCS marshalling

Our innovative PRV terminal blocks for DCS marshalling featuring a PUSH IN connection and our multifunctional DCS marshalling terminals featuring a screw connection (WMF) not only save space in the panel; they also guarantee more effective signal transmission in process control systems.

Shielding and earthing

Our protective earth conductor and shielding terminals featuring different connection technologies allow you to effectively protect both people and equipment from interference, such as electrical or magnetic fields. A comprehensive range of accessories rounds off our range.

Building installation wiring

For building installations, we offer a complete system that revolves around the 10×3 copper rail and comprises perfectly coordinated components: from installation terminal blocks, neutral conductor terminal blocks and distribution terminal blocks to comprehensive accessories such as busbars and busbar holders.

The secure and efficient way of distributing power

Klippon® Connect provides the required flexibility

Increasing levels of automation call for many three-phase motors to be attached as efficiently as possible. Thereby, all wires of a three-phase motor need to connect to a single terminal block, which is also used for potential distribution.

The Klippon® Connect motor connection terminal blocks AMC cut an impressive figure with their small design and the PUSH IN technology for the fast and safe wiring. Various marking options support distinctive marking.

Klippon® Connect motor connection terminal blocks AMC allow each potential to be connected to one tier of the terminal block. This potential connection within the terminal block provides reliable potential distribution.

The unique, triple-deck design of the new Klippon® Connect motor connection terminal blocks AMC allows for safe motor connection in the smallest of spaces

Your special advantages:

The pioneering solution for space-saving motor connection

The Klippon® Connect motor connection terminal blocks AMC enable a potential connection which can be plugged directly into each tier. Thus, the terminal blocks can also provide potential distribution and represent a remarkable space saving solution for many fields of application.

Testing point on each tier

The terminal blocks allow the recording of control measurements on each tier directly through standard 2.0 mm test plug.

Optimal level connection

The terminal blocks enable an efficient potential distribution whenever multiple tiers are connected.

Applications up to 800 V

With its integrated end plate, the terminal blocks can handle applications of up to 800 V.

Time and space saving

Fast motor connection due to PUSH IN connection with an optional wiring of three potentials and a PE on the same terminal block on a width of just 5.1 mm.

Safe supply for consumers in the panel

Klippon® Connect for optimum control voltage distribution

In control circuits, electrical energy from the power supply is distributed to downstream consumers in the panel. In order to guarantee safe supply of power, a confusingly high number of conductors must be connected, which can lead to incorrect wiring.

Our Klippon® Connect control voltage distribution terminal blocks AAP with and without fuse allow the simple and compact construction of complete control voltage distribution. They ensure effective control voltage for the equipment in the panel. The unique modular concept can be tailored individually to each machine type.

The potential distribution terminal blocks AAP impress with their standardised design with two possible structures – alternating or grouped. Simple cross-connection options save space and installation time and prevent incorrect wiring.

The tailor-made Klippon® Connect potential distributor terminal blocks AAP ensure a neat and compact design of the control voltage distribution. Fused distribution can also be implemented in an even smaller space than was previously possible.

Your special advantages:

The pioneering solution for wiring complex control circuits

The innovative Klippon® Connect potential distributor terminal blocks AAP enable the neat and compact design of complete control voltage distribution. The modular concept provides the corresponding products for implementing control voltage distribution with either fuse protection (AAP21 – AAP22) or without (AAP11 – AAP14).

Space saving

The combined functionality of positive and negative potentials in one terminal block enables a significant space saving.

Potential distribution with fuse protection

The fuse can be replaced quickly and easily by simply releasing and opening the fuse holder on the system.

Coloured pushers

The colours make distinguishing between the different potentials easy. Time-consuming and costly troubleshooting is prevented.

Two cross-connection channels

Thanks to the modular system, another terminal block can be attached and expanded using an additional cross-connection in the second cross-connection channel.

AAP - potential distribution terminal blocks

Clear, compact construction of control voltage distribution

Example configuration of potential distribution terminal block with fusing

- Group fusing through breakaway of individual poles in the cross-connections
- Groups can be switched potential-free via a disconnecter
- Direct potential distribution possible without fusing within the structure

Load monitoring and potential distribution combined

maxGUARD – taking control voltage distribution to a new level

Fail-safe and maintenance-friendly control voltage distributions that can be installed in a time and space-saving manner are a must for efficient machine and facility operation.

With the new maxGUARD system, the terminal blocks (previously installed separately) for distributing potential to the outputs of the electronic load monitors become an integral part of a 24 V DC control voltage distribution solution.

The innovative combination of load monitoring and potential distribution saves time during installation, increases safety against failure and reduces the amount of space required on the terminal rail by 50 %.

Ideal for machines and systems: the reliable maxGUARD system represents load monitoring and potential distribution all in one. It saves space and time, can be applied in a modular fashion and is extremely service-friendly.

Your special advantages:

Unique combination of load monitoring and potential distribution

The unique combinability of electronic load monitoring and potential distribution terminal for a complete 24 V DC control voltage distribution creates plenty of space on the terminal rail, saves valuable wiring time and eliminates wiring errors. The modular system adapts itself optimally to every application.

Extreme ease of servicing

Sophisticated operating, testing and connection elements permit safe access to all voltage potentials and load circuits during commissioning and maintenance.

Practical disconnecting lever

Potential distributor with a disconnecting lever for simple galvanic isolation of the load circuit for testing and checking purposes.

Innovative cross-connections

Less time and effort needed for wiring due to cross-connections between load monitoring and potential distribution terminals.

Can be used in a customised way

The sheer range of variants and the very different potential distribution terminals and additional components enable customised solutions at all times.

Particularly space-saving

Electronic load monitors and potential distributors with a 6.1 mm pitch.

Clear wiring for high-density signalling levels With Klippon® Connect in the smallest of spaces

With the current levels of automation, a large number of sensors monitor the production process. Terminal blocks are therefore particularly important for signal wiring.

Compared with conventional wiring solutions, the Klippon® Connect initiator/actuator terminal blocks AIO allow for high wiring densities with up to four different potentials on a width of just 3.5 mm. When combined with an I/O system, they ensure effective and safe potential distribution.

Our signal wiring solutions are geared towards future automation needs and are available in many different design types. The large number of variants allows you to benefit from maximum flexibility when it comes to designing the signal feed.

The Klippon® Connect initiator/actuator terminal blocks AIO resolve the challenge of wiring the large number of signals in a clear way by means of an extremely high wiring density with multiple potentials on a single terminal

Your special advantages:

The pioneering solution in the structured distribution of initiator and actuator signals

Klippon® Connect initiator/actuator terminal blocks AIO provide tailored and particularly compact solutions for wiring initiator and actuator signals.

Coloured pushers

Each conductor – positive, negative, signal or PE – has its own colour. Incorrect wiring is prevented, while installation and maintenance are made more efficient.

Check and test point

The different potentials can be tested at every contact point. Testing work in the panel is significantly speed up.

PUSH IN technology

Both rigid conductors and conductors with wire-end ferrules can be reliably connected directly and without the need for any tools. For maximum contact security in a minimum amount of time.

Many variants

Whether it's for three- or four-conductor initiators or actuators with and without a protective earth connection, we've got the perfect terminal block in our range.

AIO – sensor-actuator terminal blocks

Weidmüller – Your partner in Industrial Connectivity

As experienced experts we support our customers and partners around the world with products, solutions and services in the industrial environment of power, signal and data. We are at home in their industries and markets and know the technological challenges of tomorrow. We are therefore continuously developing innovative, sustainable and useful solutions for their individual needs. Together we set standards in Industrial Connectivity.
