

Fork sensors and optical windows

Experts in small part detection and counting tasks

FGL-RK – LED red light fork sensors

from Page 544

- Precise small part detection from 0.2 mm
- Indicator LEDs with all-round visibility over entire fork edge
- Simple sensor mounting via dovetail guides
- Sensitivity adjustment via teach-in button or control line
- Robust metal plug connection

FGL-IK – infrared fork sensors

from Page 546

- Precise small part detection from 0.2 mm
- Indicator LEDs with all-round visibility over entire fork edge
- Simple sensor mounting via dovetail guides
- Sensitivity adjustment via teach-in button or control line
- Robust metal plug connection

FGL 5-IK – LED fork sensors for the detection of labels and multilayers

from Page 548

- Specially designed for label dispensers
- High speed of 12 kHz for very accurate positioning
- Robust metal housing
- Easy teach-in during operation

FGL – LED red light fork sensors with metal housings

from Page 550

- Resistant zinc die-cast housings
- High switching frequency up to 3 kHz
- Sensitivity adjustment via potentiometer

Fork sensors and optical windows display characteristic properties as a result of their special housing design: thanks to their precise beam guidance they are particularly suitable for small part detection. The sensors are also easy to mount because no time-consuming adjustment is required.

The fork sensors of the FGL-IK and FGL-RK series detect parts from a diameter of 0.2 mm. They are used, for example, for small part detection on conveyor sections and chutes or for counting bulk goods on vibration conveyors. Rotational speed measurement is another typical application. The optical windows of the FG series are employed, for example, for detecting thread breaks in the textile industry, for part detection in transparent tubes in pneumatic conveyors, or for ejection detection. Fork sensors and optical windows are frequently the first choice for use in plants subject to strong vibrations, in particular, thanks to their robust housings and the design-related fixed light beam.

Precise detection and user-friendly details: plastic fork sensors

Fork sensors with plastic housings (FGL-RK and -IK series) are, in all respects, perfectly thought-through products. On the one hand, they are particularly shatterproof thanks to the elastic housing material, on the other hand, their numerous user-friendly detail solutions are highly impressive. Thus, in addition to the usual mounting holes, threaded sleeves and dovetail designs are also integrated. In combination with the MBD-S94 bracket, the latter permits flexible mounting in almost any desired position in the process. Operation by means of dynamic teach-in is also very easy: the measurement sensitivity can be directly adjusted on moving objects. In addition, the switching distance can be checked anytime thanks to the all-round visibility of the indicator LEDs. Even a product that, at first glance, appears simple can be quite refined!

FGL with mounted MBD-S94 bracket and easily visible indicator LEDs on the fork edge.

FG – Infrared optical windows from Page 554

- Robust metal housings
- Sensitivity adjustment per potentiometer
- Adjustable output signal duration of 10 ... 300 ms
- Dynamic signal evaluation

 made in Germany

TYPICAL SENSOPART

- Simple and robust housing
- Metal or plastic housing options (FGL) or robust metal housings (FG)
- High resolution for precise small part detection (fork sensors from 0.2 mm, optical windows from 0.8 mm)
- Various fork and window widths available
- Easy, rapid mounting without complicated adjustment
- Red light or infrared LED options
- High switching frequency of up to 3 kHz
- Dynamic signal evaluation (FG)
- 3- or 4-pin connector depending on variant
- Reliable function even in harsh conditions
- Indicator LEDs easy to see from all sides

10

Fork Sensors and Optical Windows – Product Overview

	Type of light	Adjustment	Fork width / window size	Special features	Page

Fork sensors

System description

Method of function

Fork sensors function according to the through-beam principle. The transmitter is located in one arm of the fork and transmits its light to the receiver directly opposite in the other fork arm. Thus a great advantage of fork sensors is that the transmitter and the receiver no longer need to be aligned. Reduced cabling work and flexible mounting possibilities further accelerate commissioning of the sensors. The shared housing design is available in differing fork widths (5 ... 220 mm) and fork depths. The particular advantage of fork sensors lies in their simple commissioning.

An important feature of SensoPart fork sensors is their particularly reliable function with maximum precision. The smallest objects, with a diameter of 0.2 mm, are reliably detected. High switching frequencies also allow detection with rapid conveyor processes. Sensitivity adjustment of the sensors takes place via a teach-in button and can be carried out during running processes (dynamic teach-in). Fork sensors are available with metal or plastic housings, red light or invisible infrared light.

Precise small part detection on feed belts, rotational speed measurement or the precise positioning of objects are typical applications for fork sensors.

Metal version

- Simple and robust design
- N.O./N.C. function switchable
- 3-pin connection plug

Plastic version

- NPN or PNP output options
- 3- or 4-pin connection plug
- Dynamic teach-in
- Adjustment also possible on moving objects
- Switching state LEDs visible all-round
- Numerous mounting possibilities (including dovetail)

Counting parts on a vibration conveyor

An **FGL fork sensor** checks whether the feed section is completely occupied with work-pieces and, if necessary, stops the conveyor.

Method of function

Strictly speaking, optical windows are through-beam light grids. In effect, several through-beam photoelectric switches are mounted and aligned on two opposite sides. Modulation of the transmitted light and the special geometrical arrangement ensure that the differing “through-beam photoelectric switches” do not interfere with one another. The number of “photoelectric switches” in the housing is an indication of the optical window’s resolution and thus determines the minimum object size of the detection quality. The shared housings are available in differing frame widths (40, 80, 120 mm).

The simple cabling due to a single shared plug, the pre-aligned transmitter and receiver – and thus simplified commissioning – are particular advantages of the optical windows. Simply connect and align. Finished.

Checking the ejection of small parts, e.g. on presses and stamping machines, is a typical application for optical windows. Whereby the resolution of the light grid and its response time is decisive for the reliable detection of small objects. The resolution of SensoPart optical windows ensures the reliable detection of small parts from as little as 0.8 mm. It is even possible, thanks to dynamic signal evaluation, to detect objects through transparent tubes. The adjustable output signal duration (signal length: 10 ... 300 ms) ensures maximum compatibility with the PLC.

Features

- High resolution
- Dynamic signal evaluation
- Infrared light
- Robust metal housings
- Simple sensitivity adjustment via potentiometer

FG detection of objects through a tube

Optical windows also detect objects transported through a partially transparent tube thanks to dynamic evaluation.

Connection cables	From Page A-38

FG 40 / 80 / 120

Optical windows

PRODUCT HIGHLIGHTS

- Ideally suited for monitoring ejection
- Active zone 40, 80 or 120 mm
- Dynamic evaluation
- Adjustable output signal duration 10 ... 300 ms

Optical data		Functions	
Window size	40 x 80 mm ² / 80 x 80 mm ² / 120 x 80 mm ² (see Selection Table)	Display LED, green	Operating voltage indicator
Type of light	Infrared, 880 nm	Display LED, yellow	Switching output indicator
Resolution	1.0 mm ^{1, 2} / 1.2 mm ³	Sensitivity adjustment	Via potentiometer
		Adjustment possibilities	Output signal duration via potentiometer
Electrical data		Mechanical data	
Operating voltage, +U _B	10 ... 30V DC	Dimensions	(See plug connection)
No-load current, I ₀	≤ 40 mA ¹ / ≤ 45 mA ² / ≤ 60 mA ³	Enclosure rating	IP 67 ⁴
Output current, I _e	≤ 200 mA	Material, housing	Aluminium, anodised
Voltage drop,	≤ 3.5 V	Material, active areas	PMMA
Protective circuits	Reverse polarity protection, U _B / Short-circuit protection (Q)	Type of connection	See Selection Table
Protection Class	2	Ambient temperature: operation	-10 ... +55 °C
Power On Delay	< 100 ms	Weight	See Selection Table
Switching output, Q	PNP		
Output function	N.O.		
Switching frequency, f (ti/tp 1:1)	3 ... 100 Hz		

¹ FG 40 ² FG 80 ³ FG 120 ⁴ With connected IP 67 plug

Window size	Switching output	Type of connection	Weight	Part number	Article number
40 x 80 mm ²	PNP	Plug, M8x1, 3-pin	280 g	FG 40 I-PSM3	831-81000
80 x 80 mm ²	PNP	Plug, M8x1, 3-pin	400 g	FG 80 I-PSM3	831-81001
120 x 80 mm ²	PNP	Plug, M8x1, 3-pin	480 g	FG 120 I-PSM3	831-81002
